

When change brings new solutions to health care.

We now live in a time that has seen fundamental changes in the way many of us buy goods and services. The era of eCommerce and online shopping is here to stay. Technology can offer useful new ways to greatly improve our quality of life. This certainly applies to many aspects of health care; including pharmacy.

Here's an example: For many of us, managing multiple medications is a challenge. 10.6 million Canadians take daily chronic medications and 1.2 million Canadians over age 65 take 5 or more medications. These numbers are substantial and the underlying problem is that 8 million Canadians are concerned about medication adherence for themselves or someone they care for. They are concerned about following the doctor's orders: taking their prescriptions on time and understanding the directions. Poor adherence diminishes the value of the medications we take and affects our health and wellbeing. This is one of the biggest challenges faced by healthcare professionals, including pharmacists, today.

Alliance Pharmacy has taken this message to heart and provides real solutions geared to the needs of all Canadians especially those who take multiple medications.

More than a mail-order pharmacy, Alliance Pharmacy is a central-dispensing pharmacy that is designed to enable convenient and cost-effective access to a preferred pharmacy, including patient support services such as drug reviews, counselling, reminders and free delivery. Alliance Pharmacy offers the same brand-name and generic medications from the same manufacturers as any community pharmacy but with minimal overhead and operational costs. Our central dispensing model cost savings are passed along to you with lower dispensing fees, lower markups on drug cost and free overnight delivery* to your home or anywhere you designate in Canada.

At Alliance, we're focused on helping you with all your pharmaceutical needs. Whether filling existing prescriptions, giving advice regarding new prescriptions or providing you with the convenience of ordering your favourite over-the-counter products from our online store, we emphasize the best in customer care. Prescription counselling is provided on all initial prescriptions and experienced pharmacists are available for private and confidential consultation over the phone. Alliance's Medication Dashboard gives you access to all of your medication information and service features including access to drug images and information, tracking your packages, making refill requests and the ability to download your medication list.

While we make a priority of finding ways to deliver cost savings, greater convenience, and access, we are innovators in helping patients take the right medications when they need to - **Alliance MedPack™**.

With Alliance Pharmacy, medications are dispensed quickly and accurately through efficient robotic dispensing technology and can be supplied in specialized Alliance MedPack compliance packaging at no extra charge. Alliance MedPack is a multi-dose strip pack consisting of medications organized by date and time of day - ideal for improving adherence in patients taking multiple medications. It really takes any guesswork out of taking the right medication at the right time. Vitamins and supplements can also be included in the Alliance MedPack upon request.

Medpack makes medication management easy which is a priority for Alliance Pharmacy Group as your pharmacy.

Getting started is easy. To get started, simply visit AlliancePharmacy.ca or call us at **1-877-796-7979**. We'll transfer your prescriptions, review your medications and discuss service options to improve your medication management.

Pharmacy for Today and the Future. There's no doubt that ordering your prescriptions online and having them delivered right to your door (whether at home or at work anywhere in Canada*) the next business day is a different way of doing things but we know you'll soon enjoy the simplicity and convenience of using Alliance Pharmacy.

* Some restrictions apply. Actual delivery times depend on origin, destination, weather conditions and other factors and are estimates only.
